

Goal

What does the system need?

Shared outcome

What could we deliver together?

Priority area

What will we do in 2 years that's only possible through working together?

HTQ's role (and value add)

How does HTQ make this possible/more efficient/more effective?

How we measure success

How will we evaluate our shared impact?

Lead
Lag

Connect the right people to deliver outcomes

- ✓ Use research to tackle health service priorities
- ✓ Link researchers and end users (clinicians, clinician researchers, clinical administrators, consumers)
- ✓ Identify and convert innovative ideas into action

- Clear, streamlined, repeatable way of turning health challenges into scalable action
- New solutions/models of care piloted in multiple health services
- Increased collaboration between researchers, clinicians and end users
- More external health and medical funding to Queensland

Priority #1

Develop and pilot a consistent, collective approach for **using research to tackle specific large-scale health service needs/issues** – starting with a priority that aligns with the Health Minister's Charter and HTQ partners' joint regional needs assessments:

- Establish new models of care between EDs and Mental Health Units to ensure patients presenting to hospital with mental illness are triaged and treated promptly

Activate collective focus & drive on key issues

- Lead the process of bringing together the **right stakeholders** (e.g. consumers, including First Nations and other priority groups, and primary care) to identify **causes and develop potential solutions** that build on the **existing evidence base** to pilot
- **Enable piloting** across multiple health services sites
- **Enable opportunities** for securing **external funding** to scale research programs, their implementation and evaluation
- **Deliver** the dissemination of a clear **co-designed process and resources**
- **Evaluate process**, refine based on feedback and confirm second health service need for next pilot

- 1.1. **Defined process and resources developed**
- 1.2. **Process applied (and refined) to 2 health needs**
- 1.3. **Number of times the process is applied to a specific health need by 2028 (HTQ-driven & partner-driven)**
- 1.4. **Process embedded as an ongoing mechanism for prioritising HTQ research and advocacy focus**
- 1.5. **Amount of funding secured for projects initiated through the collaborative process**
- 1.6. **Scale and impact of solutions tested and evaluated across health services over next 5 years**

Build the capability of our research translation workforce and amplify our innovation culture

- ✓ Create more research-active clinicians
- ✓ Improve access to translation expertise and health economics to drive accelerated impact
- ✓ Strengthen the research culture within health services (i.e. more evidence-based, research-driven care)

- Improved capability of workforce in accessing and securing resources (including funding) for research translation projects
- A more research-informed, innovative culture in health services that drives evidence-based care
- Enhanced skills and confidence in identifying, analysing and solving health service challenges using research methodologies
- Better retention and attraction of passionate research-active clinicians in Queensland

Priority #2

Deliver a structured **mentorship and training program** for early-career research-active clinicians across HTQ partners

Priority #3

As a partnership, develop a **consistent maturity model** as a blueprint for building innovation and research capability in HTQ health services

Inject expertise in a considered, consistent way

- **Lead the co-design process** and deliver the **mentorship and training program**
- **Lead** the establishment of and practical support for a **connected, interprofessional, peer-to-peer learning cohort**

- 1.1. **# participants enrolled in the program**
- 1.2. **Participant experience and perceived impact on research culture** (via pre-post surveys)
- 1.3. **Active embedding of learnings** (post-program tracking)
- 1.4. **# participants actively in research after 5 years**
- 1.5. **Increase in interprofessional collaboration**

Define (objectively) what excellence looks like

- **Lead stakeholder engagement** to measure current innovation and research culture across HTQ partners
- **Lead the co-development of a HTQ partner-specific maturity model**, drawing on national and international best practice
- **Lead the co-development of a roadmap** to support HTQ partners to strengthen their innovation and research culture on their journey to 'excellence'

- 1.1. **Queensland-specific blueprint for driving excellence in integrating innovation and research**
- 1.2. **Baseline maturity data across the region (strengths & opportunities)**
- 1.3. **Standard questions in staff surveys to track research culture**
- 1.4. **Clear actions/benchmarks to support planning and uplift**
- 1.5. **Improvements in innovation and research maturity within our health system over next 5-10 years**

Priority #4

Develop and promote **navigation tools and recommended TRIP** (*Translating Research Into Practice*) pathway to connect frontline staff with tools to be evidence-based health practitioners

Leverage and clarify across the system

- **Lead the end-to-end process** (e.g. map existing resources/support, engage staff across multiple levels, co-design solutions)
- **Deliver** a co-designed **navigation tool** and recommended **TRIP pathway**

- 1.1. **Number of users accessing the tool/resources**
- 1.2. **Participant feedback on usability and relevance of the navigation tool and resources**

Remove barriers to collaboration to accelerate translation

- ✓ Reduce time wasted on duplicated or unnecessary processes/bureaucracy
- ✓ Increase energy invested in innovation (rather than frustration)
- ✓ Build Queensland's capability in clinical trials and studies

- Consistent processes that make it easier to collaborate in an efficient, productive way
- Increased capacity of research translation workforce

Priority #5

Harmonise and streamline approval requirements across HTQ partners (leveraging the HTQ Passport)

Priority #6

Position and promote the Clinical Trials Hub as a central and trusted resource for clinical researchers and clinical trial teams

Broker shared agreement and alignment

- **Enable** discussions to **simplify and coordinate site-specific approval requirements**
- **Deliver** updated **HTQ Passport Agreement** that incorporates agreed partner changes

- 1.1. **Researcher feedback on ease of access and collaboration across academic & health partners**
- 1.2. **Increased uptake of HTQ Passport Agreement**
- 1.3. **Increased collaboration across partners**

Connect and promote consistently

- **Lead** co-design discussions with **clinical trial researchers and teams** to inform content
- **Deliver more resources** to meet user needs
- **Enable** greater access to best practice tools through **raising awareness** of the Hub

- 1.1. **Increased interactions with Clinical Trials Hub resources**
- 1.2. **Ratings of effectiveness, usability and relevance of Clinical Trials Hub**
- 1.3. **Improved quality of clinical trials**

Our ongoing activities

- ✓ Targeted education and training in areas of identified need, e.g. Indigenous Cultural & Intellectual Property, best practice CCI
- ✓ CCI Microgrants Program
- ✓ Digital Health Networking Breakfast
- ✓ National HREC Conference
- ✓ Health Studies Australian National Data Asset (HeSANDA) Queensland node
- ✓ Digital, Mental Health, CCI and Human Research Ethics and Governance Collaborative Groups

Inclusive partnership approach

- ✓ Whole system lens inclusive of primary care
- ✓ Engaging closely with priority and vulnerable groups
- ✓ Active representation and connection across levels within HTQ partners
- ✓ Ongoing insights and analysis to shape collective impact and success
