

Health Translation Queensland

# Health Research Needs Assessment

Aim: To identify and respond to health research translation needs, emerging priorities and funding opportunities

Outcomes:

Identified significant trends and issues in demographic & health data

Identified gaps and opportunities for collaboration in Queensland

## Health Research Needs Assessment process

- Scoping
- Determining assessment criteria
- Collecting, analysing and presenting data\*
- Applying assessment criteria and accepting identified needs

Identified 9 health research priority areas, each with potential focus areas & collaborative opportunities:

Ageing/aged care

Chronic conditions

Health system improvement

Health system preparedness

Maternal, child & adolescent health

Mental health

Palliative and end-of-life care

Primary health care

Rural/remote communities

\* Incorporates research evidence through data and literature, practical experience through key stakeholders, clinicians and researchers, and lived experience through consumers as evidence.
